for completing

Minecraft

Level 2

Date

October 20, 2026

Minecraft and Python

Commands, loops, and logic: Python brings the agent and world to life

Loops and functions

Repeated actions with loops, stored numbers in variables, and wrote functions so code stayed short.

What makes a game

Saw what makes a game fun: goal, rules, obstacles, and rewards, then suggested improvements.

AI in plain words

Learned how AI works, asked it for code with a clear prompt, then fixed that code step by step.

Coordinates in code

Moved the world on x, y, and z: placed blocks, checked the ground, and teleported the player.

The agent decides

Wrote if and else: the agent looked around, chose an action, and reacted to how many blocks it had.

A game of their own

Built a Python mini-game: score, timer, and restart. Found bugs and improved the finished program.

*Technical skills

Python: variables, loops, conditions, functions, lists, coordinates, and debugging.

*Personal skills

Agrees on roles, plans each step, explains the solution, and presents the project.
